

HIGH TECH GIFTS

PXK
Innovation & Promotion

2022

PXK has always consistently acted for sustainable development and ethics.

While it is taking time for our societies to take into consideration the environmental and social issues, PXK has adopted for a long time a responsible behaviour in our purchases, in our supply chain and in the human resources management.

Our Environmental Commitment

We give priority to suppliers with a clear eco-friendly politic. We develop and select sustainable products and packaging.

Our Quality Assurance approach, one of the most complete of our industry, has been set up since the company's creation: it bans automatically all the products that do not fully respect legal and environmental rules. We give priority to companies that have their own environmental approach.

What we do expect from our suppliers:

- They must comply with the applicable environmental standards in the country they operate.
- They set up rules to improve the security in handling, storage, elimination, recycling, or management of raw materials, wastes, air emissions and wastewater discharges.
- They prevent contamination of the local environment by anticipating accidental spills and discharges,
- They keep on improving their environmental performance by regularly setting new environmental goals and launching plans of action.

Our Social Commitment

In regards with the employee's revenues, the access to training sessions, the salary raise, the transition into retirement, the discrimination based on races, on origins, on religion, on handicaps, on gender, on sexual orientation, on trade union involvement, on political views or on ages, we do not committed neither support any acts that would be considered as a discrimination or a difference in employees/partners treatment.

We do fully respect the right of our employees to be involved in the trade union of their choice, as well as their right of collective negotiation.

Our partners must not be involved in undeclared or dangerous labour. In the country they operate, our partners must comply with health and safety laws and rules, with the legal labour worktime, with the salaries regulation, with the prohibition of disciplinary proceedings, etc...

We are taking Major Responsible, Ecological and Social Commitments for a better world.

Our Ethical Commitment

By the year 2020, all our products will be manufactured by subcontractors meeting the requirements of the BSCI, SEDEX, SMETA or WCA scales.

There will be no longer integration of subcontractors that do not meet the most stringent requirements in terms of human resources management and social commitments.

We have never assembled or packaged using forced labour, penitentiary labour, dangerous labour, child labour under the age of 16. This age is stricter than the one imposed by the ILO Convention C138.

We do require from our suppliers to renew their commitments to strictly comply with these obligations and we push them to have their own subcontractors to fully respect those requirements.

We comply with all applicable laws and regulations and we do respect the rules of conduct set out in the ILO Fundamental Conventions, namely C87 and C98 about freedom of association, C29 and C105 about the abolition of forced labour, C11 and C100 about equality and C138 and C182 about child labour.

Our Goal

Our main purpose is to provide the best offer to our BTOB clients that want to proceed to sustainable and eco-friendly purchases.

We keep on taking this commitment with our clients, our suppliers, our employees and we are fully determined to do everything necessary to satisfy the societal and environmental requirements that our clients are naturally expecting.

In the coming months, we are going to accelerate our developments of Eco-friendly products, based on natural raw materials (FSC wood range), biomaterials (corn starch), recycled and recycling products (PET plastic, recycled strokes)

We are taking Major Responsible, Ecological and Social Commitments for a better world.

PIX ECO

PIXeco

**The Collection of High Tech devices
fully made of recycled plastic,
pack in their 100% eco-friendly
box FSC®**

In France, 45.5% of the plastic consumption is used to produce packagings.

According to an article released in the press edition «Libre Service Actualités (LSA)», professionals, distributors and operators, are working hard to find solutions to replace plastic.

Among these options : wood and cardboard. According to industrials, the cost to manufacture those materials is getting higher and justify a significant price raise in retail market this year and in the coming years.

That is the main reason why PIXIKA is offering today 6 High Tech accessories in recycled plastic with a 100% eco-friendly packaging. All the boxes are made of recycled paper 100% FSC, manufactured from wood fibre from certified managed forests and controlled.

PIXECO offers you to reference this High Tech trendy accessories, ideal for impulse buying and to increase your additional sales. Boost your eco-friendly commitment and share with your customers your true involvement into the ecological transition acceleration !

The mark of
responsible forestry

THE PAPER CARD

Presenting a range of paper cards with an embedded USB device and a capacity of up to 32 GB of data.

PROMOTIONAL GIFT
AWARD 2013

Why Paper?

Paper combines the advantages of printed and digital media. Distributing printed material with a USB drive allows you physically to transmit relevant information and improve the impact to your communication through the addition of documents, digital files or web links.

How do I use Paper?

- Distribute **multimedia-advertising cards**: Sometimes a video or an image can have more impact than words! Paper is the first advertising card which you can directly add your videos, presentations, annual reports etc. An asset to better communication and to better sales.
- Create **interactive business cards**: transmit information about yourself or your company simply by handing out your card.
- Send **connected mail**: Double the effectiveness of your promotional mailing thanks to the Paper version of Webkey: a Plug and Play USB key with an automated link to your website, great for communicating an online contest, coupons, etc.
- Educate through an **informative card**: Boost the impact of your awareness or information campaigns. The printed content can summarise your message and the USB drive distributes the multimedia data.

P@PER, THE PAPER USB CARD

THE FIRST PAPER USB CARD!

- Super slim paper USB card, light and ecological
- Integrating a USB drive to facilitate communication of your flyers, business cards, manuals or technical instructions
- 2 chip sizes available
- Large choice of card formats, full colour printing on both sides with an easy to detach USB chip
- Card printing service, various formats, glossy or matt finish - Printed on 450 gr paper

ALL ABOUT WEBKEE

The much talked about webkey is a revolutionary concept but few companies understand its benefit. Here is a reminder of the advantages and uses of the webkey to improve the ROI of your advertising campaigns.

Webkey, what is it ?

In principle it looks exactly like a USB drive. It plugs into the USB port of your computer in the same way.

The difference is that the Webkey has no memory capacity because it is not used to store data. It is programmed with the URL of your choice, and this page will automatically open after inserting the key.

1/ CONNECT
THE VIRUS FREE WEBKEE
TO THE USB PORT OF YOUR
COMPUTER

2/ ACCESS
THE URL PROGRAMMED
TO OPEN AUTOMATICALLY IN
YOUR BROWSER

3/ ANALYSE
THE EFFICIENCY
OF YOUR CAMPAIGN
IN REAL TIME !

The advantages:

- **The price!** It is much cheaper than a USB drive because it has no memory
- **The adaptability:** Our Webkee's are manufactured to integrate with your printed media to create interactive and engaging media: Stick-it is an adhesive webkey, P@per has an embedded webkey, so light and slim that it can be inserted into an envelope or even stuck to a flyer.
- **The modernity:** today, storage and data transfer is conducted almost exclusively over the Internet, or "Cloud". The webkey offers direct access to this data stored in the cloud, and at half the price!
- **The measurability:** We provide a statistical tool that lets you know who is connected, when and how many times.

OFFICE
PXKCARE

THE OFFICE REVOLUTION

The first Range of Antibacterial Computer Accessories

Recent studies has revealed that our computer accessories (mice, keyboard, smartphones...) are a breeding ground for bacteria. Manipulated every day, touched by different persons, rarely cleaned, those accessories are vectors of contamination (food poisoning, cold, infection etc...)

According to studies that was run in the U.S.A, in Chicago, and in the Netherlands, the duo mouse/keyboard contains up to 400 times more bacteria than a toilet bowl !

Whether it's the computer accessories or the smartphone (another study highlighted by the Daily Mail in the United Kingdom has revealed that there would be more than 1400 different bacteria on our smartphones)... those tools are contaminating the daily lives of their users.

PXK has developed the first range of Computer Accessories Solutions that will eradicate forever the bacteria: Mouse, Keyboard, Powerbank, USB Flash drive...

KEYBOARD CARE

ERGO CARE

SLIM CARE

IRON CARE

Thanks to the **Metalskin Medical® Technology**, certified NF S90-700 norm, **PXK** offers now a concrete solution to reduce the risk of bacterial contamination due to the use of computer accessories and mobile devices.

The **Metalskin Medical® Technology** is a coating made from recycled solid copper which is a powerful antibacterial, harmless to man. It is particularly efficient to eradicate bacteria, microbes and other germs and viruses.

CERTIFICATION

Further to numerous tests performed by an independent and approved Laboratory and the results obtained, it is hereby certified that the surfaces of the objects and articles PIXIKA covered with MetalSkin Medical material, and manufactured according to the tested process, are complying with the norm NF S90-700.

Those surfaces are **eliminating 99% of the bacteria within 1 hour in normal** environmental conditions.

This certification is valid 1 year from its edition.

Done in Neuilly, the 20/05/2020

For the relevant legal purposes and to whom it may concern,

Stéphane PENARI
President MetalSkin Technologies SAS

WHAT IS THE AFNOR S90-700 STANDARD ?

All products in the PIXCARE range are certified to AFNOR S90-700 and CNRS standards for efficacy against COVID-19.

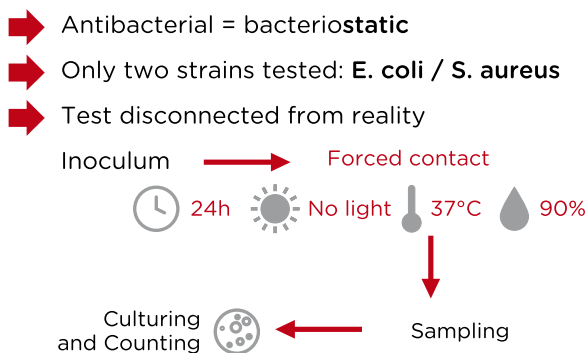

The old ISO 22196 standard for cleaning products contained inappropriate terminology such as “bacteriostatic”, “bacteria-resistant”, “bacteria-repellent”, etc., which covered vastly disparate situations and were inadequate for improving hygiene quality.

In April 2019, AFNOR published a new standard that puts this concept of hygiene quality back at the centre of the debate:

- Four strains tested (Staph. aureus, Enterococcus hirae, Pseudomonas difficile, Escherichia coli);
- Test performed under normal environmental conditions (light, temperature, humidity);
- Requirement to achieve a 2 log reduction (-99.9%) in one hour on all four strains in order to claim bactericidal quality.

This standard is intended to become a new management tool for improved hygiene quality. Its quality makes it a worthy candidate for a new ISO standard.

ISO 22-196 / JIS Z 2801 AN INADEQUATE STANDARD

- ➔ A 2.5 log reduction after 24 h is sufficient
- ➔ An **inferior standard** certifying materials that lack the qualities claimed when used under **normal conditions**.

STANDARD S90-700

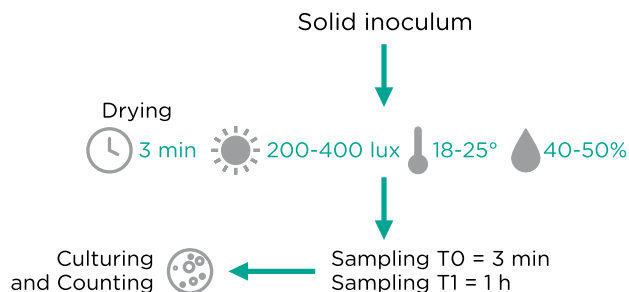

A HIGH-QUALITY, AMBITIOUS STANDARD

- ➔ Method for **measuring the basic bactericidal activity of non-porous surfaces**
- ➔ AFNOR committee founded in March 2017 /Chaired by Mme Christine ROQUES
- ➔ Broad-based composition: Epidemiologist, Biostatistician, Regulatory Specialist, Industrialists, Microbiologists, Materials Specialists
- ➔ Public consultation opened October 2018
- ➔ Publication January 2019
- ➔ Aspiring to ISO standard

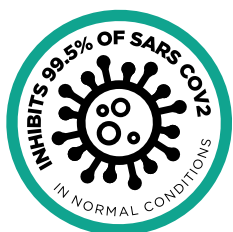

STANDARD S90-700

A PRAGMATIC, REALISTIC STANDARD

- ➔ Applies only to surfaces
- ➔ **Tests four strains**
P. aeruginosas, S. aureus, E. coli, E. hirae
- ➔ Protocol reproduces **normal conditions**

- ➔ Criterion: **2 log reduction in one hour on each strain**

**CERTIFIED
AFNOR
NF S90-700**

KNOW EVERYTHING ABOUT WIRELESS TECHNOLOGY Qi

What is it ?

The wireless charging or by induction is a technology that charges safely its smartphones battery with a simple contact, without using any wire. Simply set your device on a dedicated charger.

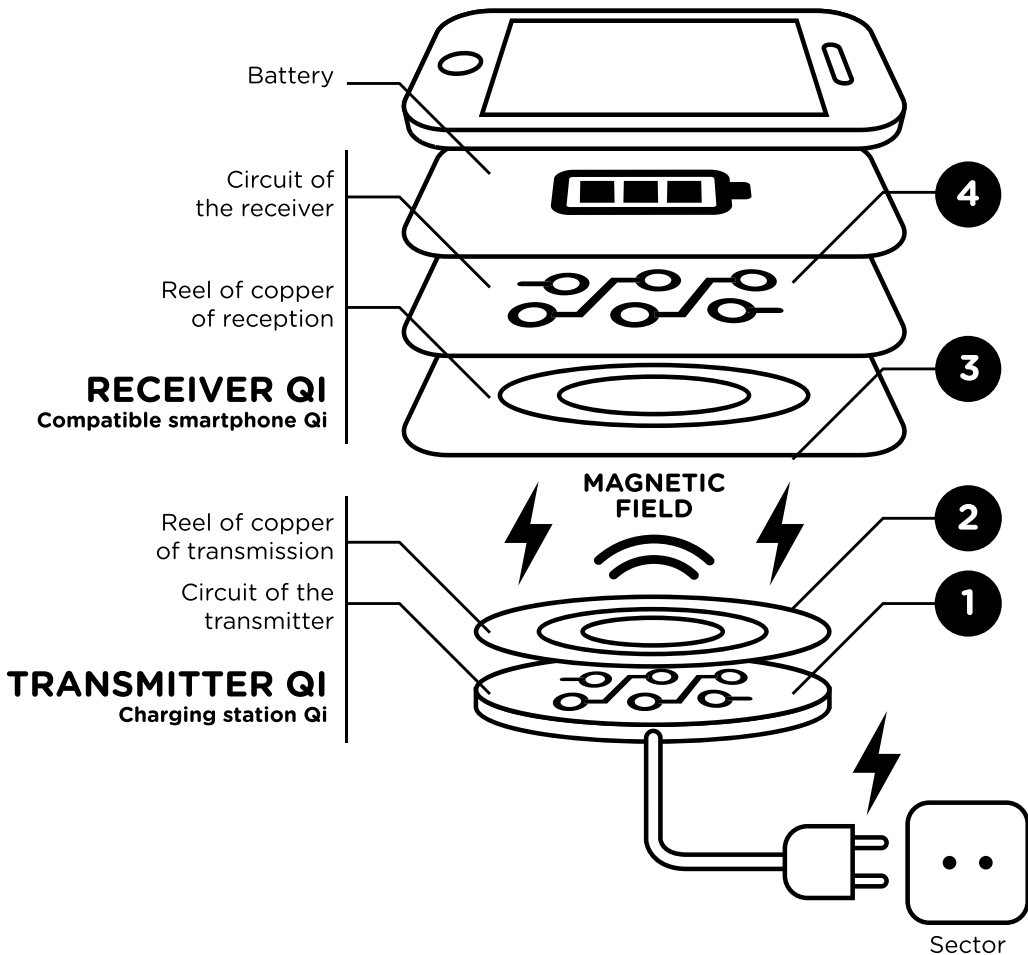

What is the Qi technology?

Qi is a **universal norm** for battery charging devices without using any cable. More and more devices are equipped with this technology (even Apple).

How does it work ?

The wireless technology Qi set is basis on the **principle of the electromagnetic induction** in which the flow of an electric current in to a reel of copper generates a current in another reel situated **besides** the first one. The energy is transmitted, wirelessly, through an electromagnetic field.

**1**

The transmitter circuit send the current in the reel of the transmitter

2

Current flowing in the reel of the transmitter create a magnetic field.

3

The magnetic field generates current in the reel of the receiver

4

Then, the current is converted by the circuit of the receiver to charge the device battery

Which charger do you need to choose ?

There are various types of chargers. They are classified according to the power and the number of reels.

The power

The power is measured in Watt (W). The standards are 5, 10 or 15 W. The majority of the smartphones are compatible with a 5W charger. The most recent ones need 10W.

The more you have W, the more speed of charge you get. However, to benefit fully of the speed, your device must be compatible. Here are a non-exhaustive list of compatible smartphones to 10W: Samsung Galaxy S9, S8, S7, iPhone 8 & X.

The number of reels.

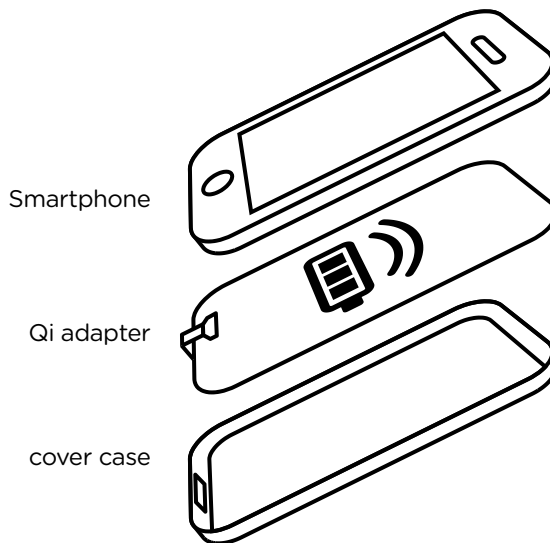

Why are wireless chargers equipped with various reels ? The more you have reels, the more the charging area is extended and the more the induction is efficient. de chargement est étendue et plus l'induction est efficace.

The Qi adapters.

If your smartphone is not compatible with wireless charging, don't freak out !

Simply plug a Qi adapter, a receiver that contains an electrical reel, to set up at the back of your smartphone **into the cover case**.

There are two types of adapters: Micro USB ones for the majority of the Android smartphones and Lightning ones for iPhones.

Goodbye cables !
**Discover now our collection of
induction promotional gifts.**

PURCHASING GUIDE FOR CHARGERS

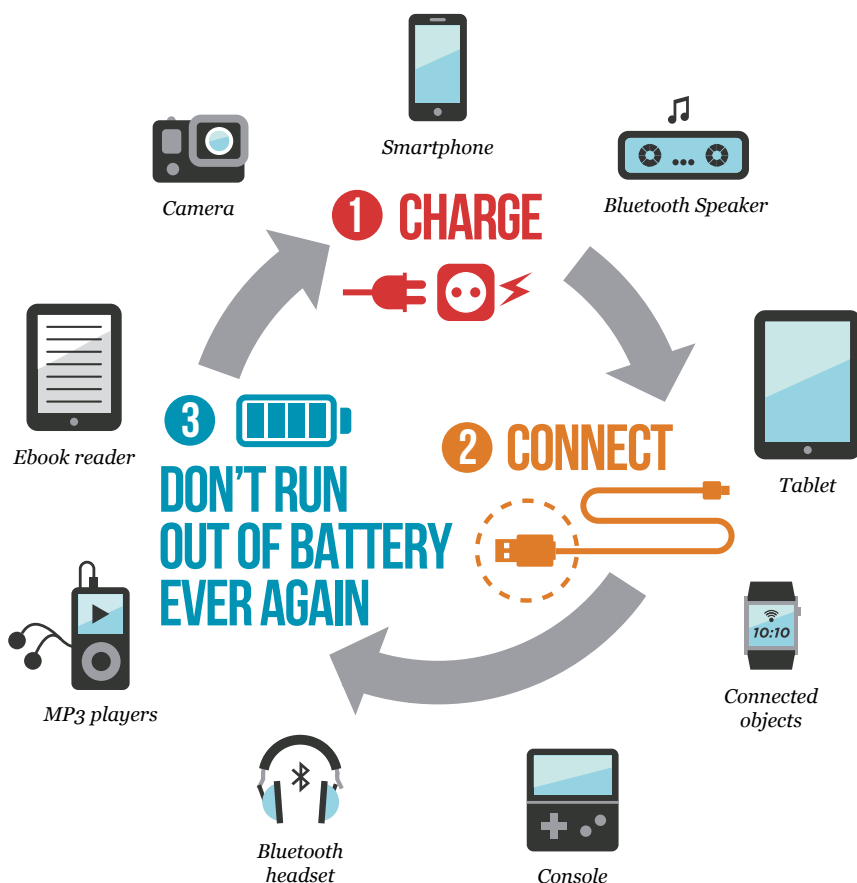

What are they?

A USB Power Bank is a mobile device that **can recharge your digital devices** on the go when there is no power nearby. They exist in numerous models and a wide variety of capacities.

Here are some tips to help you find your way around when purchasing.

How does it work?

- 1- **Charge** the power bank by plugging it into a power source before taking it anywhere.
- 2- **Charge** all kinds of digital devices via the universal USB cable wherever you are.
- 3- **No more battery failures!** Now enjoy a non-stop power supply.

How many mAh ?

The milliamp ratings represent **the quantity of energy stored** in your external battery.

Choose a capacity at least equal to or greater to the digital device to be topped up.

E.g.: An iPhone 8 battery has a capacity of 1820 mAh. A 2200 mAh power bank will fully charge your iPhone.

Smartphone	mAh	Smartphone	mAh
RED MI NOTE 10 PRO	5020	HONOR 50	4300
PIXEL6 PRO	5003	GALAXY S21 5G	4000
OPPO FIND X5 PRO	5000	IPHONE 12 PRO MAX	3687
ONEPLUS 9 PRO	4500	GALAXY Z FLIP3	3300
IPHONE 13 PRO MAX	4373	GALAXY S9	3000

How many A's?

Amperes determine the speed at which the power bank will charge your digital device.

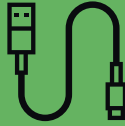

Select a power bank whose Ampere rate is close to that indicated on your device's AC adapter.
